CHAIR ELRON

Our model Elron, made of glass-fibre reinforced polypropylene, is UV-resistant, weatherproof and ideal for intensive use indoors and outdoors. The colour-contrasting frame set against the seat and back insert creates a striking, modern look. The textured, hard-wearing plastic surface gives the chair a high-quality appearance while remaining easy and hygienic to clean. Thanks to the optimized angle between seat and back and the ergonomically shaped backrest, the chair offers very good seating comfort, even for extended periods. Its stackability makes it space-saving to store and transport. This makes it particularly suitable for gastronomy, hotel use and all contract environments where design, function and economy are required.

- Striking design with a colour-contrasting frame and a textured, high-quality surface.
- High seating comfort through an ergonomic back and an optimal tilt angle.
- UV-resistant, weatherproof and stackable for professional catering use.
- Distinctive design with a contrasting-coloured frame and a textured, high-quality surface.
- High seating comfort thanks to an ergonomic backrest and an optimal angle of inclination.
- Supports up to 160 kg, as a chair or armchair, with excellent value for money

€59.00
